DanfossDanbuss

Driver Legacy

The Danfoss Danbuss driver allows to integrate Danfoss AKC device series using the Danfoss AKA-241 PC-Gateway into Niagara Framework. The driver can be used on JACE stations of Tridium. All driver components, the devices, the detected points, the histories, the alarms and the schedulers are perfectly integrated in Niagara Workbench; this allows a better efficiency in the design and maintenance of the systems, with lower cost results.

Key Features

- Communication driver, with RS-232 Danbuss protocol.
- Function to discover the "Device".
- Function to discover the "Points".

Application
  Refrigeration

Niagara Platform
  JACE with RS232 option

Niagara Version
  AX and N4
