

PostgreSql

Database Driver

The PostgreSQL driver allows to import and export data on PostgreSQL databases through the use of a Standard RdbmsNetwork from a Niagara Station. It allows to execute SQL queries on PostgreSQL databases to use data both inside tables on Niagara graphic views and on proxy points on Niagara real-time logics.

Features

- RDBMS proxy points management
- Discover points RDBMS.
- Possibility to use an RDBMS as an alarm database.
- Import and export of data tables.

Niagara Platform

N4 Supervisor

Niagara Version

N4

PostgreSQL version

Up to 14
