

# Euromap63

## Driver Legacy

The Euromap 63 driver allows to integrate devices that support the Euromap 63 standard with other standard automation protocols by using Tridium Niagara N4 Framework.

The driver can only be used on Tridium Niagara N4 Supervisor (PC, server, but is not supported by JACE) and is fully integrated into the Niagara Workbench. All driver components, devices and acquired points are perfectly integrated into the framework, this allows a better efficiency in systems engineering and maintenance with lower costs.

### Features

- Communication driver trough files.
- "Points" discover function.

### Application

Industrial Automation

### Niagara Platform

Supervisor

### Niagara Version

N4.8xx or later
