

# MT Connect

## Driver Legacy

The MT Connect driver is the ideal solution for integrating MT Connect devices with other standard automation protocols by using Tridium Niagara N4 Framework.

The driver can be used on all Tridium Niagara N4 platforms where there is a station, such as the JACE and is perfectly integrated into the Niagara Workbench. All driver components are perfectly integrated into the framework, this allows a better efficiency in systems engineering and maintenance with lower costs.

### Features

- Communication driver with http protocol.
- "Points" discover function.
- Compatible from version 1.3.0.15 or later of MT Connect.

### Applications

Industrial Automation

### Niagara Platform

JACE

### Niagara Version

N4.8xx or later
