Modbus I/O Module

MODEL	DESCRIPTION
SfAR-1M-1TI1DO	Modbus I/O module with 1 temperature input and 1 digital output

APPLICATION AND USE

SfAR-1M-1TI1DO is designed for controlling ON/OFF heaters in accordance with temperature measurement. The module has 1 temperature input (TI) and 1 digital output (DO). The temperature input can work with the most popular resistance temperature sensors and a wide range of thermocouples. The digital output is an NPN transistor output. All inputs and outputs are isolated from the logic with opto-isolators. A built-in RS485 interface allows an easy connection over the Modbus RTU/ASCII protocol. A 32-bit ARM core processor provides fast processing and communication. The module is equipped with a set of LEDs used to indicate the status of I/Os, power supply, and RS485 communication.

Configuration of the module is carried out with our free software, the SfAR Configurator. A built-in mini USB allows for performing a primary configuration of the unit without additional power supply.

FEATURES

- 1 temperature input
- 1 digital output
- Support for the most popular sensor types: PT100, PT500, PT1000, NI100, KTY81-110 (2 and 3-wire) and the most popular types of thermocouples: J, K, T, N, S, R, B
- Measurement resolution 0.1°C
- Built-in LEDs for device status indication
