

# HelvarNetDriver

## Driver Legacy

The HelvarNet communication driver enables the integration of Helvar smart lighting devices within Tridium's Niagara platform.

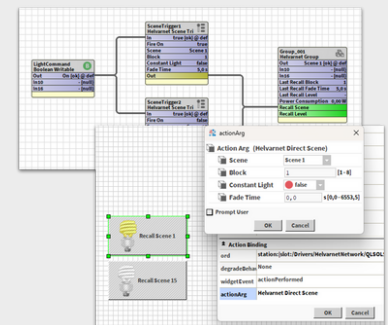

### Features

- Discovering WorkGroups and associated Helvar Routers.
- Discovering and controlling groups in WorkGroups.
- Discovering all input and output devices managed by router subnets.
- Discovering all the states and measurement values on devices.
- Recall-scene, recall-level and proportional functions on groups and devices.
- Reading of energy consumption of the groups or directly from the DALI output devices.
- Reading of states and measurement values on devices.
- Flexible license management.

### Advanced capabilities

- Router date and time synchronization.
- Group management with router fail-over mechanism.
- Smart components to simplify the integration of commands with Niagara logic.
- Recall-scene, recall-level and proportional actions with parameters for simplified use in Niagara user interface widgets.
- Optimized communication management to ensure maximum stability and reliability.
- Smart component for calculating cumulative values/states among devices.

### Application

Lighting  
Building Automation  
Energy Management

### Niagara Platform

JACE and Supervisore

### Niagara Version

N4.10 or later

STATION NIAGARA
